

iOS 4.3 is now available!

As reported by our friends at theiFile.com, the new release of iOS is now available through iTunes to all iPad, iPhone 4 and 3GS, iPod touch 3g and 4g owners.

A brief feature list include:

- *improved Safari Javascript engine and overall speed*
- *Airplay: now greatly enhanced and available to most multimedia devices in your home!*
- *iTunes sharing (at last!)*
- *Personal hotspot (iPhone 4 only): the perfect solution to turn your iPhone 4 into a wireless gateway for all devices (and get over tethering).*

I'll be checking out all new 4.3 features really soon, so stay tuned!
