

iPad + Lutron: total home control, energy saving and some Green attitude too!

✘ The iPad is cool because of applications such as [Lutron](#)'s new RadioRA 2 control system. With the [app, now available on iTunes for \\$19.99](#), owners of the RadioRA 2 can control their system from afar (say, on vacation) and put their home into "green" mode by turning off unneeded appliances.

The Lutron Home Control+ application allows you to control your RadioRA 2 or Homeworks QS lighting control system over a Wi-Fi network with the convenience of the iPad, iPhone, and iPod Touch.

Features?

iPad only:

- Quickly access multiple system features in one place with the HomeGlance screen. Available features include: a favorite keypad, a list of favorite lighting and shade zones, timeclock mode (requires RadioRA 2 version 4.0 or higher), and temperature overview (coming soon)
- Easily edit the light and shade levels programmed to keypad buttons and timeclock events in real time using the Level Editor (RadioRA 2 only, HWQS support coming soon)
- Save energy without compromising performance using "Green" buttons (RadioRA 2 only)
- View and edit timeclock events on the Schedules screen (requires RadioRA 2 version 4.0 and higher)

iPad, iPhone and iPod Touch:

1. View and adjust light and shade levels throughout your home
 2. Control system keypads including button feedback and raise/lower controls
 3. Manage multiple RadioRA 2 and Homeworks QS systems in the same app.
- The RadioRA control application (and others like it) is certainly the future in home automation.
