

Apple's iOS 5 should be available anytime soon... are you ready?

The friends at theifile.com report about [iOS5 new features](#), take a look!

I'm gonna love iMessage unified stream!

iMessage: *The new messaging feature allows iOS users to communicate over 3G and Wi-Fi with any iPhone, iPod Touch or iPad running iOS 5. You will be able to send photos and video, receive message delivery and read receipts, and see when others are typing. iMessages are synced to all of your devices, so you can pick up a conversation where you left off. Apple also promises your messages will be encrypted end-to-end for security.*
