

## Maker Holography Kit - and some how-to about holograms

Make is an ever-surprising source of inspiration!

This time is about holography - and an under \$ 100 kit should get all of us making holograms at home, albeit quite small and not so detailed... (but what the heck: it's DIY holography after all!)

I really want to know how many aren't eager to try out this one at home!

Check this video from Matt Richardson and his experiment in 3D-land:

Look here for the [Maker Hologram Kit](#): it's \$99 and Xmas is upcoming!
