[Mac User UK](#) cover: Supercharge your CV

A cover that's not (only) about iPad, iPhone & Macs: it's about people growing their skills using these technologies.

A headline I really love: **“Build on your skills to do more in 2012”** and **“This year, get the skills to ignite your career”**.

Covering Graphic Design, Video, Music, 3D CGI and, of course, App development, this cover story is quite unusual for a Mac-oriented magazine.

I guess the economic downturn has something to do with this: no more gadgetry or geekery, but more people- and real-life-oriented topics.

Job seeking, namely.
