

Windows 8 is here to stay so I decided to download the (free) **Windows 8 Public Preview** and give it a try.

You can too, just start from here <http://preview.windows.com>.

It will ask you for a valid e-mail where it will send a temporary product key. Before installing, check all requirements, though:

- a speedy processor,
- a graphics card supporting DirectX 9 or more
- 2 GB of RAM
- 14 GB of hard disk available

My test setup PC is based on... my Mac under [Virtualbox](#) ☐

A full report will follow very soon...
