

Lego Brain Bricks: Build, Connect, Play (with an iPad, some electronics and a lot of Legos!)

Needless to say, I love this stuff!

It just sums up some of the things I love the most: Lego, iPad gaming, some cool programming and some pretty electronics!

[LEGO® BrainBricks](#) from [Wonder Years](#) on [Vimeo](#).

*BrainBricks is a concept product for LEGO that merges psychical and digital play. The LEGO BrainBricks include tiny sensors, which enable the bricks to sense their configuration with one another and communicate it wirelessly to any mobile device. This allows you to bring your actual LEGO creations to life within a digital gaming experience. So, the better you build, the better they perform within the game.*
