

Latest National Geographic Magazine: “The age of disbelief” (about science)

Love [National Geographic Magazine](#): March issue’s cover story is about **disbelief, skepticism about science and doubt versus established science**.

From medicine to space, from history to dinosaur, from evolution to global climate: skepticism is all around us and is, somehow defeating science, technology and research (if not common sense).

A must read, even if you think *man never reached the Moon* ☐

or... if you think that *Earth is (almost) flat*...

What about climate change?

*“... But industry PR, however misleading, isn’t enough to explain why only 40 percent of Americans, according to the most recent poll from the Pew Research Center, accept that human activity is the dominant cause of global warming.”*

Even worse: **two thirds of Americans believe humans have existed in their present form since time began**.

According to a [Gallup research in 2012](#), in U.S., **46% Hold Creationist View of Human Origins** and man appeared somewhere in the latest 10,000 years.

Latest National Geographic Magazine: “The age of disbelief” (about science)

**Mr. Darwin, please forgive us...**

Highly recommended reading...
