Remember those **50s SciFi themes and soundtracks**? Those **B-Movie horror scenes**? Well, most of them were made with a [Theremin](#). The instrument was invented by a young Russian physicist named **Lev Sergeevich Termen** in 1920.

Now you can play it on your browser (even on an iPad) thanks to [Femur Design's HTML5 Theremin](#).

Have fun (and play some scary tunes)!

*(note that this works fine on Chrome and Safari and has some problems when running on Firefox)*
