

Jurassic Park (and several other blockbusters) completely recreated with Lego by a dad and his daughter

✘ Animator **Paul Hollingsworth** (with [Digital Wizard Studios](#)) and his daughter Hailee did something very weird, truly unusual and so cool!

Using *some \$100,000 of LEGO pieces*, they digitally managed to recreate the 1993 dino-thriller **Jurassic Park** along several other video footage worth our time watching it.

Paul and Hailee were kind enough to share with us the **behind the scenes** details, some nice tricks about video shooting, compositing and good ol' time frame-by-frame Lego animation.

I strongly advice you to check their [Youtube Channel \(DigitalWizardz\)](#) since it's a feast for die-hard Lego fans around the world!

Don't miss other movies like Lego Avengers (on [Digital Wizard Studios](#)):

Even [Mashable reported about this cool video productions](#).

I'm a long-time Lego+stop motion fan... check my own weird experiment (back in 1980!):
