

A well-done Steve Jobs animated biography (and some IT history too)

"Oh no, yet another Steve Jobs movie?"

Not exactly...

It's an animated multi-timeline **Steve Jobs'** biography, featuring all relevant IT people from 1955 to 2011, along with main IT events and computer/technology introduction events.

It's so well done (IMHO) that really deserves a second look, just to follow all inputs coming from a very interesting time-point-of-view. □
