

Ever wondered how the Internet travels across the Oceans? Check this interactive map

**Travelling around the seven seas** may seem too inadequate these days.

The guys at [TeleGeography](#) charted the **Internet undersea cable courses** with incredible detail - and depicting the [whole map](#) as an Indiana Jones journal!

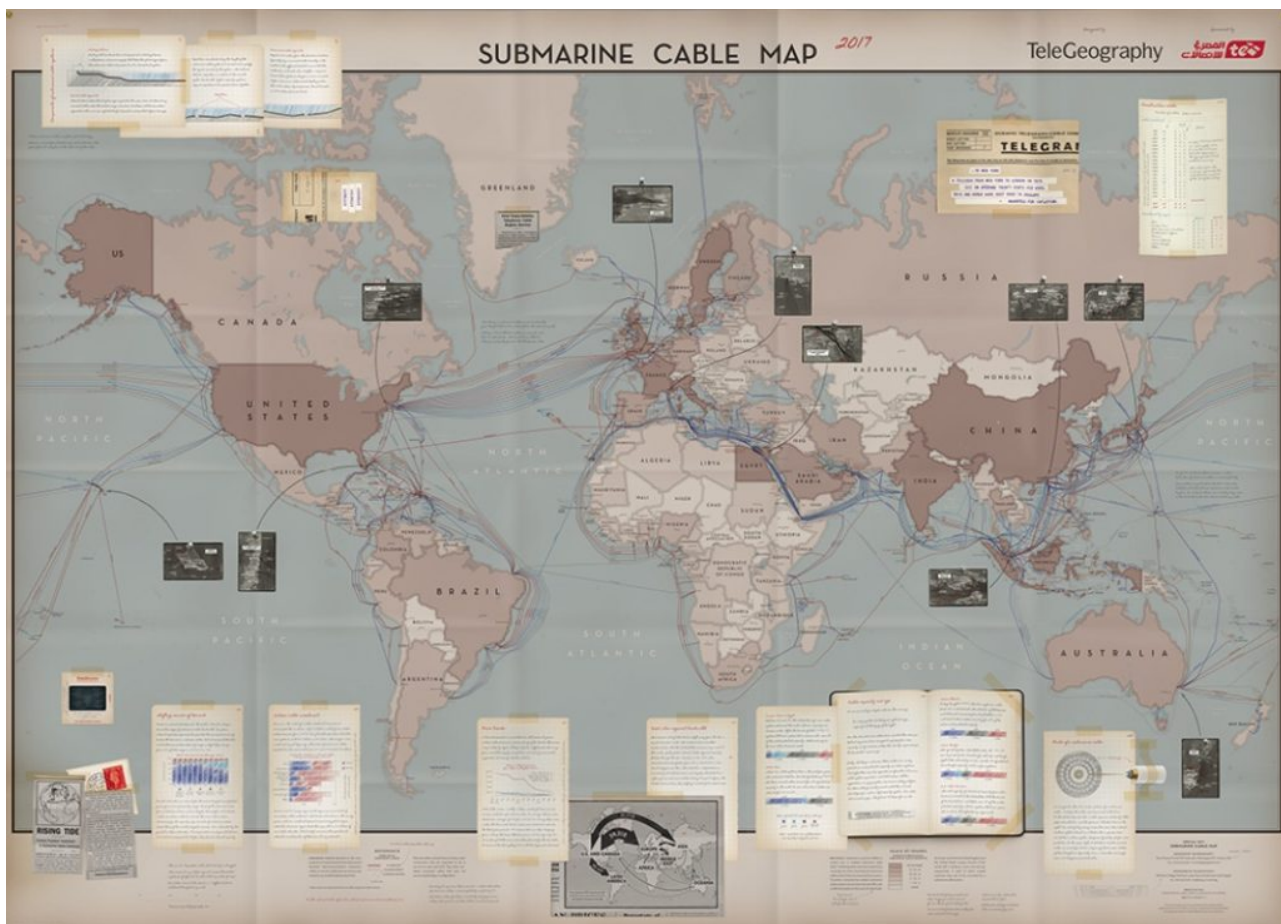

Image source: [TeleGeography](#)

According to the authors, here's a summary of features:

- 293 active and planned submarine cables that are connecting the world under the ocean
- Countries with the largest number of submarine cable connections, giving them higher resiliency
- Changes to submarine cable capacity on major global routes from 1996-2015
- The hair-like strands of fiber optic cables connecting the world
- Aerial "photos" of major submarine cable landing stations

Check for [yourself this cool, interactive map](#) (and solve the puzzle)!
